

Job Description

Python / AI-ML Developer (Fresher / Intern)

Designation	Python Developer / AI-ML Engineer (Entry Level)
Employment Type	Internship / Full-Time (Fresher)
Work Mode	Remote / Hybrid
Location	India (Remote-friendly)

About the Role

We are looking for a motivated Python / AI-ML Developer to join our engineering team. The ideal candidate has hands-on project experience building ML-powered web applications, is comfortable across the data science and full-stack toolchain, and is eager to learn in a fast-paced environment.

Key Responsibilities

- Design, develop, and deploy machine learning models and AI-powered features for real-world applications.
- Build and maintain web applications and APIs using Python (Flask) to serve ML models to end users.
- Perform data preprocessing, feature engineering, and exploratory data analysis using Pandas, NumPy, and Scikit-learn.
- Train, evaluate, and tune ML models (Regression, KNN, SVM, Decision Trees, K-Means, Ensemble Methods) for improved accuracy.
- Integrate front-end interfaces (HTML, CSS, JavaScript) with back-end ML services for an intuitive user experience.
- Write clean, modular, well-documented code and collaborate using Git/GitHub version control.
- Debug issues, optimize application performance, and reduce manual/repetitive workflows through automation.
- Collaborate with cross-functional teams to translate requirements into working prototypes and production features.

Required Technical Skills

- Strong proficiency in Python; working knowledge of Java.
- Experience with ML/data libraries: Scikit-learn, NumPy, Pandas, Matplotlib, Seaborn.
- Familiarity with Flask (or similar) for building and deploying web-based applications.
- Working knowledge of HTML5, CSS3, and JavaScript for front-end integration.
- Comfortable with Jupyter Notebook / Google Colab, Git, GitHub, and VS Code.
- Basic understanding of relational databases (MySQL/JDBC) and CRUD operations.
- Exposure to core ML concepts: supervised learning, model evaluation, and feature engineering.

Preferred / Good to Have

- Certifications in AI/ML, Data Visualization, or Data Analysis (e.g., Apna College, TCS Forage, CodeChef).
- Prior academic or internship project experience in ML-based or full-stack applications.
- Basic exposure to C++ or embedded platforms (e.g., Arduino).

Soft Skills

- Strong problem-solving ability and analytical thinking.
- Good communication skills with the ability to explain technical concepts clearly.
- Team player with adaptability to fast-changing project requirements.
- Eagerness to learn new tools, frameworks, and technologies.

Eligibility

- B.Tech in Computer Science & Engineering (AI & ML specialization) or related field — final-year students and recent graduates welcome.
- A portfolio of ML/AI or full-stack projects (GitHub link preferred).
